

LTE Secure Access

LTE Secure Access is a flexible, add-on solution for customers that need an affordable secondary network connection to keep their critical voice, data, and Internet traffic safe. Its multi-function design makes it ideal as a fail-over solution for your primary network or as a mechanism to extend your MPLS network to remote locations. Both implementations deliver a seamless, highly available wireless solution over our secure, private IP network or our dedicated Internet service. Not only is it powered by the largest 4G/LTE network in the nation, it's packaged with deployment services and around-the-clock customer support from Segra's Network Operations Center.

HOW LTE SECURE ACCESS WORKS

SUPPORTS VOICE, DATA AND INTERNET

This means that you can backup your entire business with this device to ensure if your area experiences a fiber cut then all aspects of your business stays up.

MULTI-FUNCTIONAL IMPLEMENTATION

This device can be deployed as a backup/fail-over device or as a primary connection to your MPLS.

HIGH AVAILABILITY

Device is supported by the largest nationwide wireless 4G/LTE network.

SEAMLESS FAIL-OVER WITH LAYER 2 DELIVERY

No matter what happens to cause your service interruptions LTE Secure Access will always be on a prompt immediate fail-over as if nothing has happened and with no actions by yourself.

FLEXIBLE DESIGN

Supports MPLS, private line or Internet connections no matter where you're located.

AFFORDABLE, EASY AND FAST TO DEPLOY

Low-cost & as simple as plugging into power and/or your devices and can be implemented into your setup immediately it's on site.
