

IaaS

Many organizations want to free themselves from maintaining at least some portion of their IT infrastructure. Owning and maintaining a local data center has physical and security requirements that are becoming increasingly complex to manage.

The Segra Infrastructure as a Service (IaaS) platform takes the data center headache out of customer managed server environments allowing them to focus on the deployment and functionality of their operating system and applications. Connect via our private fiber network into our 24/7/365 staffed, highly available data centers, and leverage all the compute and storage resources you need to run your most critical applications. Segra's IaaS offering comes in two forms, a multi-tenant cloud offering for our clients requiring minimal resources, and a private cloud offering for customers requiring more dedicated resources. Segra Subject Matter Experts will work with you to understand your requirements and design a solution that meets your specific business needs.

Segra's team will work with you to understand your current compute, storage, and software requirements and align them with the best Segra cloud solution.

Our cloud platforms remove IT Infrastructure headaches from our clients and allow them to focus on their applications, while Segra secures and maintains the underlying infrastructure and operating systems. In essence, our customers' IT Infrastructures are replaced by the Segra cloud equivalent.

FEATURES

What if a single infrastructure could?

- Highly available IT infrastructure to house critical applications
- Enable diverse set of enterprise applications
- Reduce IT costs
- Eliminate complexity
- Increase application availability
- Scale performance and capacity without disruption

BENEFITS

- Lower initial and ongoing cost
- Multi-site replication options
- Solution is simple and cost effective
- We offer virtualization, hardware, storage and networking in our cloud - always on and always available
- Customer retains control of their environment with full access to powerful troubleshooting and analytics tools
- From one virtual workload to 1000, Segra's IaaS solution is massively scalable and designed to meet your needs
