

Managed Router

The Simple LAN Managed Router service is part of the Managed LAN family of solutions for outsourcing the management of the customer's premise uplink path to the Segra WAN. The Segra Managed Router service is a complete solution for the management of your on-premise LAN-to-WAN router. The service transitions all responsibility for the router from your team to ours.

Segra identifies the equipment needed to meet your requirements and installs it on your premise. Then we configure, monitor, and support the router, including performing maintenance and repair activities.

PERSONALIZED APPROACH

Our certified technicians and engineers are based on your market and take a personalized approach to managing your devices and service.

NETWORK OPERATIONS CENTER SUPPORT

The Managed LAN services are monitored and managed 24/7 by our Network Operations Center.

BENEFITS

- Saves operating expenses associated with managing your WAN router
- Leverages Segra's network expertise so you don't have to acquire this know-how in house
- Maximizes the availability of your IT resources by offloading work outside your core business
- Improves operational efficiency and effectiveness by providing a one-stop-shop for your premise WAN-uplink router and your WAN service
- Scales easily as your throughput needs increase

FEATURES

- Routing design
- OSPF and BGP protocols
- Multiple Quality of Service (QoS) options
- Public IP address assignment based on needs
- DNS & DHCP configuration

SPECIFICATIONS

- Speeds: 1 Mbps – 500 Mbps
- Access: Ethernet
- Footprint: Available across the entire fiber network
- Pre-requisites: Segra WAN service (DIA or VPRN)
