Hosted Firewall

Segra Hosted Firewall services provide an industry leading comprehensive, multi-layered, approach to security. Our offerings work together to eliminate or reduce the risks associated with blended attacks while coordinating security alerting, logging, reporting, compliance and response.

The Hosted Firewall service applies security policies to all Internet traffic traversing your network. The policies are determined by the level of firewall protection you select. Segra configures the service for your protection level and then activates, monitors and manages it. Because the service is cloud-based, deployment is quick and threat updates are fast.

All Hosted Firewall customers are served from a carrier-grade, geo-redundant platform that is housed in a data center environment. This infrastructure ensures Segra provides the best customer experience and the highest level of protection possible.
